

- Creates a single, complete, compliant and easily retrieved electronic note for each procedure
- Comprehensive medical content built by the ProVation® in-house physician team
- Based on physician entries, CPT and ICD-9 codes and CCI edits are automatically generated
- Streamlines ICD-10 transition with timely delivery of new code sets and medical content; will support dual coding functionality
- Drives structured and compliant data capture, then pairs it with robust reporting and analysis
- Allows for capture and submission of appropriate PQRI measures, and GI Quality Indicators, including electronic GIQNIC submission
- Instantly and automatically prepares Patient Letters, Referring MD Letters, CC: Letters, Patient Recall Letters, Post-Op Orders, Patient Instructions, Pathology Requests, Pathology Results Reports and Pathology Follow-up Letters
- Interfaces with endoscopes and other image capture equipment for instant inclusion of images in the procedure note

The screenshot displays the ProVation MD: GI software interface. The main window shows a structured medical note for a colonoscopy procedure. The left sidebar contains a tree view with categories such as Exam, Staff, Attending Dr. Participation, Endoscopes, Pre-Anesthesia Assessment, Difficulty/Tolerance, Patient Profile, Indication, Medication, Findings, Complication, Impression, Recommendation, Post Op Orders, Patient Instruction, Pathology, Coding, and Images. The 'Findings' section is expanded, showing a list of findings with checkboxes and a 'Maneuver' dropdown menu. The main text area contains a detailed procedure note, including respiratory and cardiovascular examinations, patient history, and findings of a sessile polyp in the rectum and a pedunculated polyp in the sigmoid colon. Below the text, there is an 'Image Association: Annotation and Association' window showing a grid of four endoscopic images labeled 1, 2, 3, and 4. A larger image of the sigmoid colon is shown below the grid, with a legend indicating the locations of the findings. The legend includes 'Colon - Single Polyp', 'Colon - Diverticulum', and 'Colon - Hemorrhoids'. The 'Whole Colon' diagram shows the locations of the findings with numbered markers 1, 2, 3, and 4.
