

RxPro

Want to increase your revenue stream by capitalizing on e-prescribing? RxPro enables you to do just that.

In-house prescription dispensing by private medical practices is one of the fastest-growing trends in the US. RxPro provides you with everything you need to stock, dispense, and adjudicate claims for commonly-prescribed medications, right in your own office.

Your patients will rave about the convenience of filling a prescription without having to make another stop.

10 Ways RxPro Improves Patient Care and Enhances Your Practice:

1. Generates weekly reports
2. Automates your ordering system
3. Boosts Revenue
4. Manages patients, locations, inventory, and ordering
5. Saves time for staff and patients
6. Increases patient convenience
7. Web-based application – No software necessary
8. Provides dedicated client support and training
9. It's user-friendly
10. Facilitates EHR integration

If You Answer "YES" to Any of the Following Questions, then RxPro Is Right for You:

- Have you considered dispensing medication directly to patients rather than writing a scrip and sending your patient to the nearest pharmacy?
- Do you want to add a substantial revenue stream to your practice's bottom line?
- Do you hand out sample medications?
- Do you write at least 150 prescriptions a month?

What Is the Value of RxPro for You?

- In-office prescription dispensing is a competitive response to the rapidly-changing Healthcare landscape
- On average, providers see 20 patients a day and write an estimated 60 prescriptions a day. If you were to earn a projected \$5 per prescription, you would add an extra \$300 a day to your bottom line
- Benefit from integrating e-prescribing with your EHR system
- 2012 promises a 27% cut in Medicare reimbursements. Prescription dispensing is a source of ancillary revenue to offset declining reimbursements and rising expenses
